Nifty started the week with on a flat note and traded with extreme volatility on the eitherside which led it to close in negative territory. Nifty closed at 14835 with a loss of 33 points on a weekly basis.

On the weekly chart the index has formed a "Doji" candlestick formation indicating indecisiveness amongst market participants regarding the direction. Since past 3-4 weeks index is consolidating within broad range of 15000-14400 levels representing sideways trend. The chart pattern suggests that if Nifty crosses and sustains above 15000 levels it would witness buying which would lead the index towards 15150-15300 levels. Important Support for the week is around 14500-14400. Nifty is now well placed above its 100 SMA indicating positive bias in the short term. Nifty continues to remain in an uptrend in the medium term, so buying on dips continues to be our preferred strategy. For the week, we expect Nifty to trade in the range of 15000-14500 with mixed bias.

The weekly strength indicator RSI is moving downwards and is quoting below its reference line indicating negative bias. However momentum oscillator Stochastic has turned positive from the oversold zone indicating a possible consolidation or an up-move in the near term.

The trend deciding level for the day is 14845. If NIFTY trades above this level then we may witness a further rally up to 14905-14980-15040 levels. However, if NIFTY trades below 14845 levels then we may see some profit booking initiating in the market, which may correct up to 14775-14715-14640 levels.
