

NATURAL GAS

15/04/2021

Technical outlook

Natural gas 4hr chart has formed “Ascending broadening wedge” pattern. The last few sessions ended up sideways mode along with some corrections inside the channel. The market is expected to continue on the bearish momentum based on the price action, once break below a key support holding near 196. The downside rally could be testing all the way through 193-190 levels in the

upcoming sessions. Alternatively, if the market struggles to break the support level, then it might retest the same and turn bullish/sideways once again. Key resistance holds at 199. A slide to 202-205 is also a possibility if the price makes or break above the current resistance level.
