Technical outlook

MCX Silver May futures technical chart has taken the formation of "Falling channel" pattern in daily time frame. Last few sessions ended up in sideways mode along with some corrections inside the channel. The market is expected to continue on bearish momentum based on the current

price action, once the same break below the key support level holding near 65800. The downside rally could be extending all the way up to 65000-64200 levels in the upcoming sessions. An alternative scenario indicates that if the market struggles to break the support level, then it might retest the same and revise the trend to bullish/sideways mode once again. Key resistance holds near 67400. A slide to 68200 is also a possibility if the price makes or break above the current resistance level.
