

## NATURAL GAS

24/12/2021

### Technical outlook

Natural gas daily chart has formed “Descending broadening wedge” pattern. Over the last few sessions, we have seen some rapid movements, where the last one had traded lower and closed in red. The market is expected to continue on the bearish momentum based on the reversal price action, once break below the current support holding near 275. The downside rally could

be testing all the way through 270-265 levels in the upcoming sessions. Alternatively, if the market struggles to break the support level, then it might retest the same and turn bullish/sideways once again. Key resistance holds at 300.
