Technical outlook

MCX Silver March futures technical chart has taken the formation of "Rising channel" pattern in 2hr time frame. Last few sessions ended up in sideways mode along with some corrections inside the channel. The market is expected to continue on bullish momentum based on the current price action, once the same

break above the key resistance level holding near 66600. The upside rally could be extending all the way up to 67400-68200 levels in the upcoming sessions. An alternative scenario indicates that if the market struggles to break the resistance level, then it might retest the same and revise the trend to bearish/sideways mode once again. Key support holds near 65800. A slide to 65000-64200 is also a possibility if the price makes or break below the current support level.
