

## NATURAL GAS

06/05/2021

### Technical outlook

Natural gas 4hr chart has formed “Ascending broadening wedge” pattern. The last few sessions ended up sideways mode along with some corrections inside the channel. The market is expected to continue on the bearish momentum based on the price action, once break below a key support holding near 217. The downside rally could be testing all the way through 214-211 levels in the upcoming sessions. Alternatively, if the market struggles to break the support level, then it might retest the same and turn bullish/sideways once again. Key resistance holds at 220. A slide to 223-226 is also a possibility if the price makes or break above the current resistance level.
